GX free-form progressive lenses three-dimensionally fuse the patient’s entire prescription onto the back surface of the lens. The front surface of the lens is a perfect sphere, completely eliminating front surface distortion. True, customized Rx-specific aspheric power compensation in the progressive channel results in billions of optically precise prescriptions. Visual fields are significantly expanded, with consistently wide near vision.

GX lenses are available in a wide variety of materials and lens treatment options, including polarized and Transitions® lenses.

**GX1 - Soft design that is enjoyed by first time wearers.**

- Most suitable design for beginners and distortion-sensitive users.
- Recommended for people with active lifestyles and for prescriptions with low to medium add powers.
- Available in three corridor lengths: 11mm, 13mm, 15mm, with minimum fitting heights of 16mm, 18mm, 20mm. Fitting cross is located 4mm above geometric center.

**GX2 - Hard design with wider reading portion, better choice for seasoned wearers and frames with smaller B measurements.**

- Recommended for prescriptions with medium to high add powers.
- Available in three corridor lengths: 11mm, 13mm, 15mm, with minimum fitting heights of 16mm, 18mm, 20mm. Fitting cross is located 4mm above geometric center.

**GX3 - More advanced “blended” soft design which is ideal for emerging presbyopes, experienced wearers, and distortion-sensitive users.**

- Ideally suited for all add power prescriptions.
- Available in three corridor lengths: 12mm, 14mm, 16mm with minimum fitting heights of 17mm, 19mm, 21mm. Fitting cross is located 3mm above the geometric center.
