

Diamond Clear®

Premium Polycarbonate
Finished Single Vision Lenses

Diamond Clear lenses are the best way to provide your patients with premium-quality polycarbonate clear and Transitions® lenses.

Clear and Transitions® lenses are available with factory-applied Surpass® AR with EasyClean® Plus, one of the most durable AR coatings ever tested by Colts Labs. Engineered for the best overall durability, Surpass® ECP performs as well or better than nationally advertised brands. Its super-hydro and super-oleophobic chemistry repels water, oils and grime, and prevents

deterioration due to UV, humidity and normal temperature fluctuations. Diamond Clear with Surpass® ECP lenses are extraordinarily easy to clean, and with a new anti-static formulation, lenses stay cleaner longer.

Seventeen flatter aspheric base curves in minus powers provide superior aspheric compensation for each Rx, as well as better cosmetics and improved curve consistency for Rx balancing. Factory coated lenses also include a no-slip protector to make edging accurate and fast.
